
COMPANY PROFILE

Building homes, plots and industry in Marathwada.

Residential row houses, sanctioned plotted layouts and industrial civil works — delivered end to end across Chhatrapati Sambhajinagar.

A single team for land, structure and handover.

Shree Buildcon is a builder and developer based in Chhatrapati Sambhajnagar, working across three connected lines of work: elegant residential row houses, sanctioned residential plotted layouts, and civil and structural contracts for industrial clients.

The common thread is control of the full chain. We take a site from land and approvals through design coordination, structural work and finishing, to a home or plot that a family can register and occupy without loose ends. On the industrial side, the same discipline applies to foundations, sheds, roads and utilities — usually executed on live plant premises, where sequencing and safety matter as much as the concrete.

Every residential project we release is taken through statutory sanction before it is offered for sale, and every unit is priced against a clearly stated plot and saleable area. Buyers are supported with finance facilitation from nationalised banks and financial institutions.

AT A GLANCE

Business	Builders & Developers
Base	Chhatrapati Sambhajnagar, Maharashtra
Residential	Row houses & plotted layouts
Contracting	Industrial civil & structural works
Approvals	NA · CIDCO · RERA · AMRDA sanctioned layouts
Finance	Home loan support from nationalised banks
Corridors	Pisadevi · Shendra MIDC · Jalna Highway

What we hold ourselves to

- **Sanction first.** No layout or building is marketed before its approvals are in hand.
- **Stated areas.** Plot and saleable areas are published unit by unit, not averaged.
- **Specified finishes.** Materials and finishes are written down before booking.
- **Qualified consultants.** Architecture and RCC design are done by appointed professionals.

Where we work

Our activity is concentrated in and around Chhatrapati Sambhajnagar — the Pisadevi and Beed Bypass belt for housing, and the Shendra Five-Star MIDC and Jalna Highway corridor for plotted development and industrial contracts. It is a region absorbing steady industrial investment, and both our residential and contracting work are built around that growth.

Three capabilities, one delivery standard.

01

RESIDENTIAL DEVELOPMENT

Ground-plus-two row houses developed on our own land, from sanction through to handover-ready homes.

RESIDENTIAL DEVELOPMENT

- Land acquisition and development agreements
- Architectural and structural design coordination
- NA, planning authority and RERA sanction
- RCC frame construction and red brick masonry
- Internal finishing, fittings and external elevation
- Home loan facilitation and buyer documentation

02

PLOTTED DEVELOPMENT

Residential layouts with sanctioned plans, internal infrastructure and clean title for self-build buyers.

PLOTTED DEVELOPMENT

- Land aggregation and title verification
- NA conversion and sanctioned layout approval
- Internal cement concrete roads and drainage lines
- Street lighting, electric DP and water source
- Compound wall, open space and amenity space
- Plot demarcation, sale deed and loan support

03

INDUSTRIAL CIVIL WORKS

Foundations, sheds, flooring, roads and utilities for manufacturing plants, often on running sites.

INDUSTRIAL & INFRASTRUCTURE

- Pre-engineered steel buildings and industrial sheds
- RCC raft, footing and machine foundations
- Pedestals and pits for heavy press installations
- Heavy-duty industrial flooring and equipment bases
- PQC internal roads, aprons and hardstanding
- RCC tanks, sumps, drainage and compound works

Pre-engineered steel building under erection — primary frame, purlins and side runners in place.

Working inside live plants

A large part of our contracting work is carried out inside operating factories — laying floors and roads between production shifts, casting machine foundations alongside running lines, and building tanks and cabins without interrupting plant movement. That shapes how we plan sequencing, access and curing on every industrial job.

TYPICAL SCOPE

Excavation & earthwork · Reinforcement & shuttering · RCC casting · Steel erection · Sheeting & cladding · Flooring & paving · Drainage · Plaster & painting

From land to keys, in six stages.

The sequence below is how a residential project moves through our office. Industrial contracts follow the same spine, with the approval stage replaced by client drawings, method statements and site clearances.

01

LAND & TITLE

Site selection along growth corridors, title search, measurement and acquisition or development agreement.

02

DESIGN

Layout and unit planning with the appointed architect; RCC design and detailing by the structural consultant.

03

SANCTION

NA order, planning authority sanction and RERA registration obtained before any unit is offered for booking.

04

CONSTRUCTION

Foundation, RCC frame, masonry and services executed to the published specification with staged quality checks.

05

INFRASTRUCTURE

Roads, drainage, water, electrical DP, street lighting, compound wall and landscape put in before possession.

06

HANDOVER

Snagging, documentation, loan disbursement coordination, registration and handover of the completed unit.

Reinforcement in progress for a deep machine foundation.

QUALITY ON SITE

- Structural work to the consultant's approved drawings and bar bending schedules
- Controlled concrete supply and curing regime for slabs, floors and pavements
- Specified brand-grade fittings for kitchens, toilets, doors and windows
- Supervision by site engineers with a written stage-wise check before the next activity

FOR HOME BUYERS

Published unit-wise areas, a written specification schedule, sanctioned plans available for inspection, and assistance with home loan sanction and disbursement.

FOR PLOT BUYERS

NA-certified and authority-sanctioned layouts, clear demarcation on ground, ready internal infrastructure, and bank finance available against the plot.

FOR INDUSTRIAL CLIENTS

Scope executed to client drawings, sequenced around plant operations, with our own supervision, labour and site management through to completion.

Shri Park

RESIDENTIAL · ROW HOUSES

3 BHK Elegant Row Houses

PISADEVI
CHHATRAPATI SAMBHAJINAGAR

Entrance elevation, Shri Park — Gut No. 140, behind Maruti Temple, Pisadevi.

Shri Park is a gated cluster of eighteen three-bedroom row houses arranged as two blocks, Type A and Type B, facing a 6.00 m internal pathway with the scheme addressing an 18.00 m wide DP road. Each house is planned over three levels — a covered parking floor with a room and toilet, a first floor with living, kitchen, washing space and balcony, and a second floor with two bedrooms, toilet and an open terrace.

Units range from 1,729 to 2,047 sq.ft of saleable area on plots of 634 to 1,247 sq.ft, with the corner houses in each block offering the larger plots.

Unit schedule and specification.

Building Type A

UNIT	PLOT AREA (SQ.FT)	SALEABLE (SQ.FT)
A1	1,247	2,047
A2	653	1,739
A3	650	1,738
A4	647	1,736
A5	644	1,734
A6	641	1,733
A7	638	1,731
A8	635	1,730
A9	957	1,914

Building Type B

UNIT	PLOT AREA (SQ.FT)	SALEABLE (SQ.FT)
B1	1,239	2,043
B2	650	1,738
B3	648	1,736
B4	645	1,735
B5	642	1,733
B6	639	1,732
B7	637	1,731
B8	634	1,729
B9	1,014	1,943

Specification

STRUCTURE	Standard RCC frame structure of high quality
MASONRY	Red brick masonry, 6" external and 4" internal walls
PLASTER	Sand-faced external plaster; internal plaster with good finish
FLOORING	Vitrified tile flooring in all rooms
KITCHEN	Kitchen top with SS sink and glazed tile dado up to 3' height

TOILETS	Glazed tile dado for bath, 4' height for WC, premium fittings
ELECTRICAL	Concealed fittings with modular switches
DOORS	Good quality frames with decorative door shutters
WINDOWS	Powder-coated aluminium sliding windows with safety grills
PAINT	Premium quality paints for internal and external walls

Cut sections — parking floor, first floor and second floor of a typical unit.

Shri Nagari

RESIDENTIAL · PLOTTED LAYOUT

NA-42 Sanctioned Residential Plots

SHENDRA JAHANGIR
CHHATRAPATI SAMBHAJINAGAR

AMRDA-sanctioned layout — 64 plots served by 9.00 m internal roads.

Shri Nagari is a sanctioned residential plotted layout at Shendra Jahangir, near Limber Chowk and the Shendra Five-Star MIDC — one of the fastest-growing industrial belts around Chhatrapati Sambhajinagar, and minutes from the Jalna Highway.

It offers 64 residential plots between 700 and 1,200 sq.ft on 9.00 m wide internal roads. Reserved open space and amenity space are part of the sanctioned plan, and internal infrastructure is in place so buyers can start building without waiting.

NA-42 CERTIFIED

AMRDA SANCTIONED

BANK LOAN AVAILABLE

LAYOUT FACTS

Plots	64 residential plots
Plot sizes	700 – 1,200 sq.ft
Roads	9.00 m internal / 12.00 m peripheral
Open space	973.61 + 201.69 sq.m
Amenity space	1,186.84 sq.m

Provided at the layout

- Mahadev Mandir within the layout
- Internal cement concrete roads
- Water well for the layout
- Children's play garden
- Underground drainage line
- Electric DP provision
- Reserved open space
- Street lighting throughout
- Secured compound wall

LOCATION

Gut No. 54 (Part), Shendra Jahangir, near Limber Chowk, Shendra Five-Star MIDC, Chhatrapati Sambhajinagar 431001 — approached from the Jalna Highway via the service road at Limber Chowk, close to Shendra MIDC Kaman and Samruddhi Park.

DEVELOPED BY

Abhiraj Associates, our associate concern for plotted development. Booking enquiries: **+91 70383 91005**

Civil and structural work for manufacturing sites.

Alongside our own developments we execute civil and structural packages for industrial clients — from the foundation pits under heavy presses to the concrete roads that carry loaded trailers across the plant.

Industrial shed & plant flooring

Column line, EOT crane gantry and heavy-duty floor slab in a fabrication bay.

Machine foundations

Foundation pit, base frame and surround for a 50 MN hydraulic press installation.

PQC internal roads

Concrete pavement panels laid and cured between plant buildings for heavy traffic.

RCC pedestals & footings

Shuttered and cast pedestals with anchor bolts set for structural steel columns.

RCC tanks & sumps

Twin-chamber water-retaining structure with connecting pipework and inlet.

Site buildings & utilities

Security cabin completed with chajja, overhead tank and external finishing.

Executed on live sites.

Completed bay with crane gantry, rail-mounted transfer trolleys and finished floor.

WHAT THIS INVOLVES

- Level and layout survey against the client's plant grid
- Excavation, shoring and dewatering where required
- Reinforcement fabrication to the approved BBS
- Shuttering, casting and controlled curing
- Embedded plates, anchor bolts and pocket setting
- Reinstatement and handover of the working area

Concrete apron and hardstanding cast alongside an operating batching plant.

Steel frame erection for a new shed on a greenfield industrial plot.

STRUCTURES

PEB sheds · RCC framed buildings ·
Mezzanines · Compound walls ·
Security cabins · Utility rooms

FOUNDATIONS

Isolated & combined footings · Raft
foundations · Machine and press
foundations · Pedestals · Pits and
trenches

SITE WORKS

PQC roads & aprons · Industrial
flooring · RCC tanks & sumps ·
Drainage and storm water · External
finishing
